

## SURGICAL SUCKER/SUMP SET

R<sub>x</sub> Only

Federal (U.S.A.) law restricts this device to sale by or on the order of a physician.

### Intended Use/Indications:

The Surgical Sucker/Sump Set is intended for use in a suction system to clear the operative field of blood or other fluid. It is not intended to be used as a probe or retractor.

### Contraindications:

There are no known contraindications specific to this device.

### Precautions:

**Caution:** Inspect sealed sterile package before opening. If seal is broken, contents may not be sterile and may cause infection in the patient.

**Caution:** Care should be exercised when applying force to any Sucker or Sump Set since excessive bending of the tube or tip could cause breakage.

**Caution:** For single patient use only. Do not reuse, reprocess or re-sterilize. Reuse, reprocessing or re-sterilization will compromise the structural integrity of the device and/or lead to device failure which, in turn, may result in patient injury or illness.

### Direction for Use:

1. Connect sucker or sump set to appropriate suction line or system.
2. If using a control vent, adjust suction rate by covering or uncovering vent.
